RE: **JIMI ENHANCEMENTS**

These product enhancements were implemented to improve performance, adjustability, and ease of use for our end-users. This should give each of you and your dealer salespeople the confidence that Workstuff manufactures the finest Adjustable Keyboard Systems available today.

1A: SPRING ASSIST

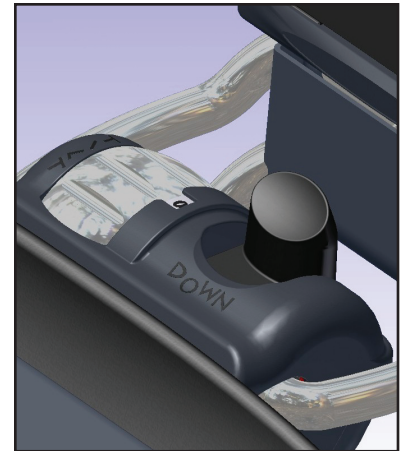

Workstuff has added a "spring assist" to all keyboard units. Adding the Spring Assist feature enhances the downward and upward adjustment of the product. Each JIMI product now has a counterbalanced feel:

Upward Adjustment: easier and effortless

Downward Adjustment: easier and smoother
just use your thumb to push "down button"

1B: NEW "DOWN BUTTON"

Workstuff has retooled our "down button". The new "down button" is a little larger and has a back wall. You are now able to adjust downward by simply using your thumb and gently pushing "back and then downward". The new "down button" is more ergonomic and end-user friendly. This is a MAJOR improvement and you will experience this immediately with your new samples.

2: IMPROVED PACKAGING

We experienced some limited freight damage during the busy holiday season with UPS Ground. In order to ensure this does not happen again, we increased and strengthened the packaging inserts for the JIMI product.

Part numbers and pricing will NOT change. The only change will be in the description of all Order Acknowledgements. The descriptions will state "version 1.2" for JIMI-1, "version 2.2" for JIMI-2, and "version 3.2" for JIMI-3.

Please contact me with any questions or to review this subject in greater detail.
